# INNOVATION

# OUR STRENGTHS

## RESEARCH, TEST, COLLABORATIONS

### OUR STAFF

There is constant dialogue between the planning and the production departments and this enables our technicians to create new products and to improve the already existing ones.

#### RESEARCH

Our main goal is to search for new materials and new manufacturing processes without compromising the strength, the reliability and the safety of the products.

#### TEST

Every single prototype that we create undergoes severe testing before being manufactured. They are also all produced according to strict EU Regulations.

#### COLLABORATIONS

UR has begun to cooperate with some of the most important research centres in Europe with the aim to reach high quality design standards and production and maintain low costs.

For the design, the study and the improvement of its products Umbra Rimorchi uses the most modern design technologies:

#### CAD DESIGN

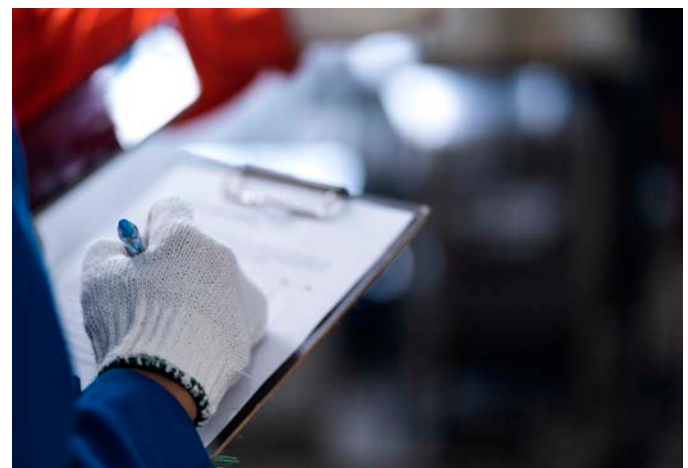

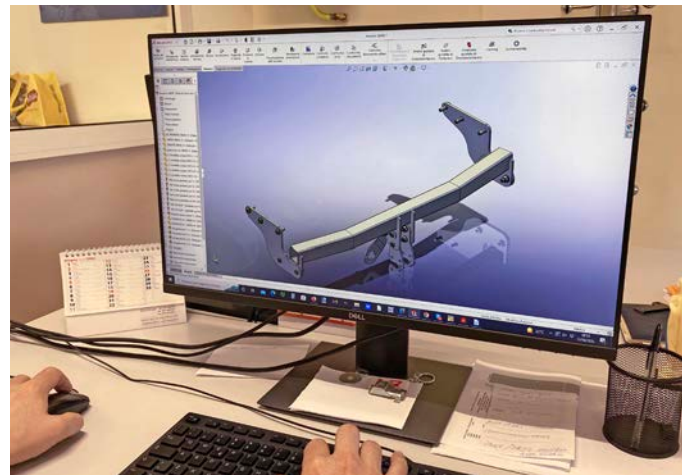

for the creation of the first prototype, in compliance with the measures required by the design of the rear of the car on which the tow hook will be mounted.

#### SOLID MODELLING

to define the tridimensional shape of the products.

#### FEM MODELS

to verify and analyze the finished elements.

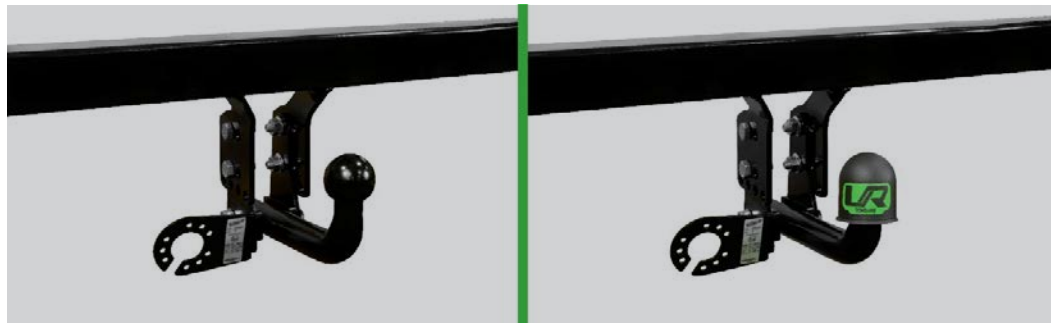

# OUR BESTSELLERS

## FIXED, DETACHABLE AND RETRACTABLE BALL

No tools are required, making this solution the best compromise for quality and price available. The lever is also compatible to lodge an anti-theft device with key, which makes the model C optimal also from the point of view of safety.

**MODEL VM**

## UNIVERSAL WIRING KITS WITH JUNCTION BOX

### LIN

Adapter for cars that implement the LIN protocol

Check compatibility.

**WARNING:**  
depending on the vehicle layout, the signal scheme may vary.

The LIN is a new signal management protocol that has recently been observed on Volkswagen group cars, including (but not only) Audi A4 crossover, Audi A4 Avant, Audi Q8 and Skoda Octavia Wagon. The LIN adapter has 6 terminals that transform data into 3 analog signals: rear lights, fog lights and position lights. On vehicles equipped with this protocol these 3 signals travel on a single cable. Using a voltmeter you can find the presence of this protocol by virtue of the 7V reading in DC, regardless of whether the lights are on or not. Brakes and arrows use a normal 12V signal instead. The trailer's position lights may be connected to the vehicle number plate lamps, which is similarly a standard 12V signal (L and R joined together).
